

Bristol - a global force in firefighter protection

Relied upon by firefighters in over 110 countries, Bristol can confidently claim to be a global leader in the specification, design and manufacture of firefighters' personal protective equipment (PPE). We deliver our world class products and support services through a network of 70 specialist distributors worldwide, while commanding a dominant share of the UK market.

Since Bristol's birth in 1801, we have evolved from a manufacturer of gentlemen's clothing, through initiating fire protective clothing for Second World War air force pilots, the development of the original Home Office PPE specification in the 1970s, to our current international status.

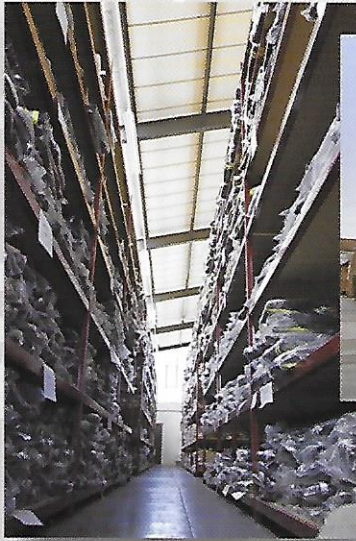

As the provider of choice for the Integrated Clothing Project (ICP), Bristol is a dominant supplier to the English fire and rescue authorities, with a customer base that also encompasses national and regional airports, industry across the length and breadth of the UK, and garments to ambulance specialist Hazardous Area Response Teams (HART). And our service goes way beyond the supply of garments – offering a solution for cleaning, decontaminating, inspection, repair and tracking of firefighting kit through our UK managed service centres, the Western Service Centre in Bristol and the Eastern Service Centre in London, and tried and trusted partners in mainland Europe.

Priding ourselves on world class service, Bristol's processes are controlled by a comprehensive quality management system, externally accessed and conforming to the requirements of ISO 9001.

Bristol's success is rooted in our skilled and committed workforce, most of whom have many years of experience with the company. Bristol is a member of the BTQ Group with affiliated companies in the USA, including Topps Safety Apparel and Quaker Safety, both of which have leading positions in the North American flame resistant and protective clothing markets.

The success story goes on. Through constant innovation, we will continue to lead the way in protecting firefighters throughout the world.

PROTECTING THE WORLD'S FIREFIGHTERS
